Dental trauma and treatment principles at primary and young permanent teeth

Nil ALTAY
Prof. Dr.
Retired faculty, Visiting professor at Oman Dental Collage

Prof. Dr. A. Nil Altay graduated from Hacettepe University, Dental School at 1986. She took her PhD degree at Pediatric Dentistry at Hacettepe University Health Science Institute at 1991. She became Associated Professor in 1995 and Professor in 2003. Her special interests at Pediatric Dentistry are behavior management, pulp therapies and dental trauma. She has been giving many dental trauma lectures and conferences since 1999 at local and international meetings. She is member of International Association of Dental Traumatology and worked as board member and general secretary during 2013-2016 and was the Co-chair of 18th IADT World Congress in 2014 in Istanbul.

Abstract
Trauma to the primary dentition and young permanent teeth present special problems and the management is often different as compared with permanent teeth. An appropriate emergency treatment plan is important for a good prognosis. Critical points of intra-oral and radiological examination, which cases should be considered as “emergency” and age-related different treatment plan options will be discussed on cases.
